[Bird Behavior and Training](#):

Pet parrots generally present challenges, such as excessive chewing - especially at certain stages in their life. They do discover their beaks as method of "disciplining us" once they are out of the "baby stage" and they can generally be somewhat naughty, and it really is important to learn to understand them and to guide their behavior before an undesirable behavior has been established. Undisciplined parrots will chew on electric wiring potentially causing house fires. They regard anything in your home as a "toy" that can be explored and chewed on; destroying items that you may hold dear or are simply valuable. Even a young bird that has not been neglected and abused requires proper guidance; this becomes even more challenging when it involves a rescued bird that may require rehabilitation.

[BIRD RESCUE - I would LOVE to rescue a medium parrot!](#)

I live in Massachusetts and I'm not having much luck finding a parrot to rescue. I know there are a lot of birds out there that need re-homing, but I'm not having any luck. :(I took my family and drove down to Lazecki's Bird Rescue in Rhode Island and they wouldn't let me have one because of the "ride" to do a home visit. Imagine?? I have owned birds for 20 years. I love them all! I lost my Hahns Macaw suddenly two years ago at only age 18 and I was devastated. I am now looking to give another baby a chance. CAN SOMEONE HELP ME?
